What is Tuning in to Teens?

This innovative and interactive evidence-based group parenting program aims to increase parent-child connection by improving emotional communication in the family. It helps parents to understand and regulate their own emotions and equips parents with skills to respond to their adolescent's emotions in a way that helps the child to develop emotional competencies.

What is included in the training?

The training will teach professionals the key skills taught to parents in the program using direct teaching, watching DVDs, demonstration, small group exercises, role plays and group discussion.
